WORK EXPERIENCE

EBAY | *New York, NY* *June 2023 – Present*

Senior Product Manager – Technical

Product lead for eBay's Authentication Product, a set of technologies used to verify the authenticity and condition of collectable and luxury items under the Authenticity Guarantee program. Partnered with cross-functional teams including engineering, design, operations, category and marketing to define requirements, drive strategy and deliver features improving customer trust.

- Conceptualized and implemented AI powered authentication models leveraging machine learning and imaging technology to improve luxury item verification accuracy, reducing error rates from 3% to 0.5% and driving over $20M in ARR retention.
- Developed and launched automation features to eliminate manual interventions in non-standard order workflows, reducing resolution time by 97%, thereby improving customer satisfaction and operational efficiency.
- Launched AI powered analytics assistant translating natural language queries into actionable insights, empowering operations to diagnose and resolve issues like shipping delays and backlogs, leading to a 5% decrease in operational costs.
- Launched a centralized product catalog containing high quality images and accurate product details, supporting eBay product listings and internal tools, improving discoverability and conversion by 3%.
- Redesigned receiving and shipping workflows by launching an Android mobile app with enhanced exception handling and shipping integrations, streamlining operations and increasing processing speed by 22%, improving efficiency.
- Launched a conveyor system that streamlined operations, reducing manual labor costs and improving throughput, resulting in $1.8M annual savings and faster order fulfillment.

Technical Product Manager *(MBA Internship)* | *Austin, TX* *May 2022 – August 2022*

- Collaborated cross-functionally to design, define user flow, and specify requirements for a new warehouse dispatch workflow.

AMAZON | *Bengaluru, India* *August 2018 – July 2021*

Program Manager – Customer Experience

Launched data products that reduced defects and enhanced post-order customer experience for Amazon India

- Conceptualized personalized training experience for underperforming Customer Service Agents (CSA) using behavioral data, improving resolution quality by 1.4%.
- Collaborated with ML engineers to develop a speech-to-text NLP model, flagging SOP deviations in agent conversations. This led to proactive agent training, improving performance and customer satisfaction by 5%, and boosting audit efficiency by 200%.
- Implemented instant refund for pre-ship cancellations, reducing refund-related contacts by 24% and generating $2.2M cost savings.
- Enhanced the contact routing mechanism by identifying opportunities to reduce transfers between CSA and collaborating cross-functionally to implement improvements resulting in yearly cost savings of $480K.
- Coordinated the execution of Interactive Voice Response and push notification intervention for issues related to Prime membership cancellation, increasing the awareness of self-serve feature and improving Prime customer retention by 9%.
- Developed diagnostic analytical dashboards to monitor post order customer experience KPIs of Amazon India eCommerce, improving response time by 82% and reducing 30 hours per week of manual effort with automation.
- Mentored new hires and created a systematic mechanism for knowledge sharing to facilitate smooth onboarding.

MU SIGMA | *Bengaluru, India* *July 2015 – July 2018*

Analytics Consultant *(Decision Scientist)*

- Led $1.2M retail client engagement and increased annual revenue by 40% by identifying and pitching solutions for new opportunities
- Formulated go-to-market strategy for a pharma company, using customer segmentation to drive sales from $8M to $50M within two years of drug launch
- Designed Order Defect Rate for evaluating Walmart.com sellers, establishing a 2% defect standard to identify non-compliant sellers.
- Developed a system to detect abnormal spikes in orders and cancellations, preventing potential revenue loss of $200K from failures
